

Crestron Commercial Lighting Solutions

WHERE BUILDING OPERATIONS
AND IT INFRASTRUCTURE MEET

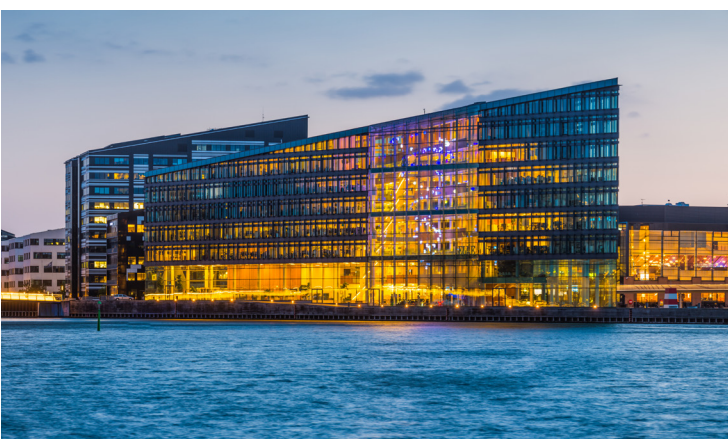

There's a better way to effectively build and manage commercial properties — and it starts with a single, unified platform that provides complete facility and building IT control.

Crestron unites commercial lighting controls with AV systems. This single, user-friendly solution bridges the gap between building operation technology systems (BOTS) and business IT technology solutions (BITS).

When systems work together, buildings work better

For new construction, lighting control systems require early planning and total-building installation compared to AV implementations. For lighting control suppliers, being specified as a preferred vendor at that early stage of building construction is critical for success. Unlike AV solutions, lighting controls are required for all buildings and lighting is required for virtually every room or space within a building. Crestron makes it easier to install and integrate lighting controls with AV every step of the way, from the very beginning.

Zūm Lighting Control for Building Interiors

Crestron Zūm® lighting control systems offer simple yet innovative design, installation, and use at the front end of every project — with the flexibility to apply wired and wireless lighting control in as many or few spaces as needed.

Each space is configured with either distributed or centralized control devices and accessories compatible with most lighting fixtures and control types. This enables rapid completion of each phase of a lighting control project and greatly improves efficiency of provisioning. The power of Zūm is simple: it is the easiest solution on the market to specify, install, scale, manage, and use.

ZŪM WIRED

Uses CAT5 and Ethernet to connect challenging locations — while integrating with Crestron Unified Communications systems, third-party occupancy devices, environmental and acoustical sensors, and other data-dependent devices.

WIRELESS

Easily managed from a secure 2.4 GHz network and massively scalable up to 32,000 devices, 1,000 spaces, and nearly six million square feet — including outdoor mesh network capabilities

More

Complete control for everything in every room

From lighting to HVAC to Microsoft Teams, uniting all your in-room technology lets everyone — and everything — work together seamlessly. Crestron's experience in commercial applications gives us the widest range of building system solutions in the industry, so there's even more systems to integrate, and productivity to unlock.

Control how you collaborate

Scalable digital workplace solutions, Crestron Flex video conferencing, NVX hardware and software, Air Media, scheduling, and Sightline technology come together to make collaboration more equitable.

Create the best environment

Use AV Management and Control Software to deliver consistent, intuitive in-room experiences.

Do it all from anywhere

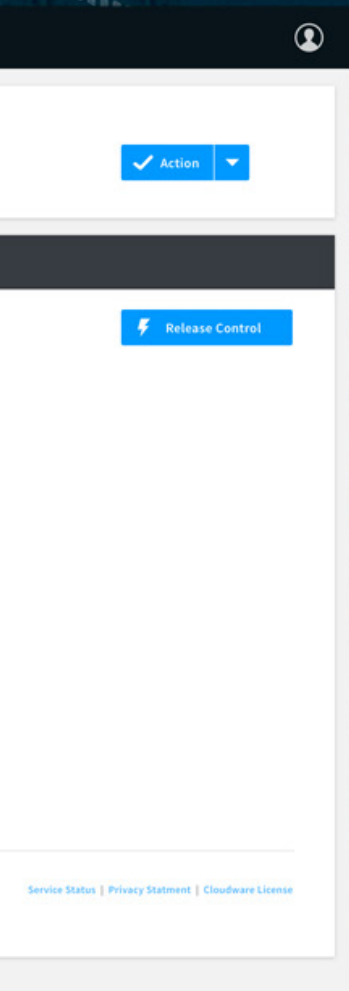

Manage all your technology in one place with the XiO Cloud® platform — including 3rd party devices.

Have all the comforts of home

Make any office feel like a home office with residential and hospitality solutions, including LED lighting fixtures, and shade and ambient lighting controls.

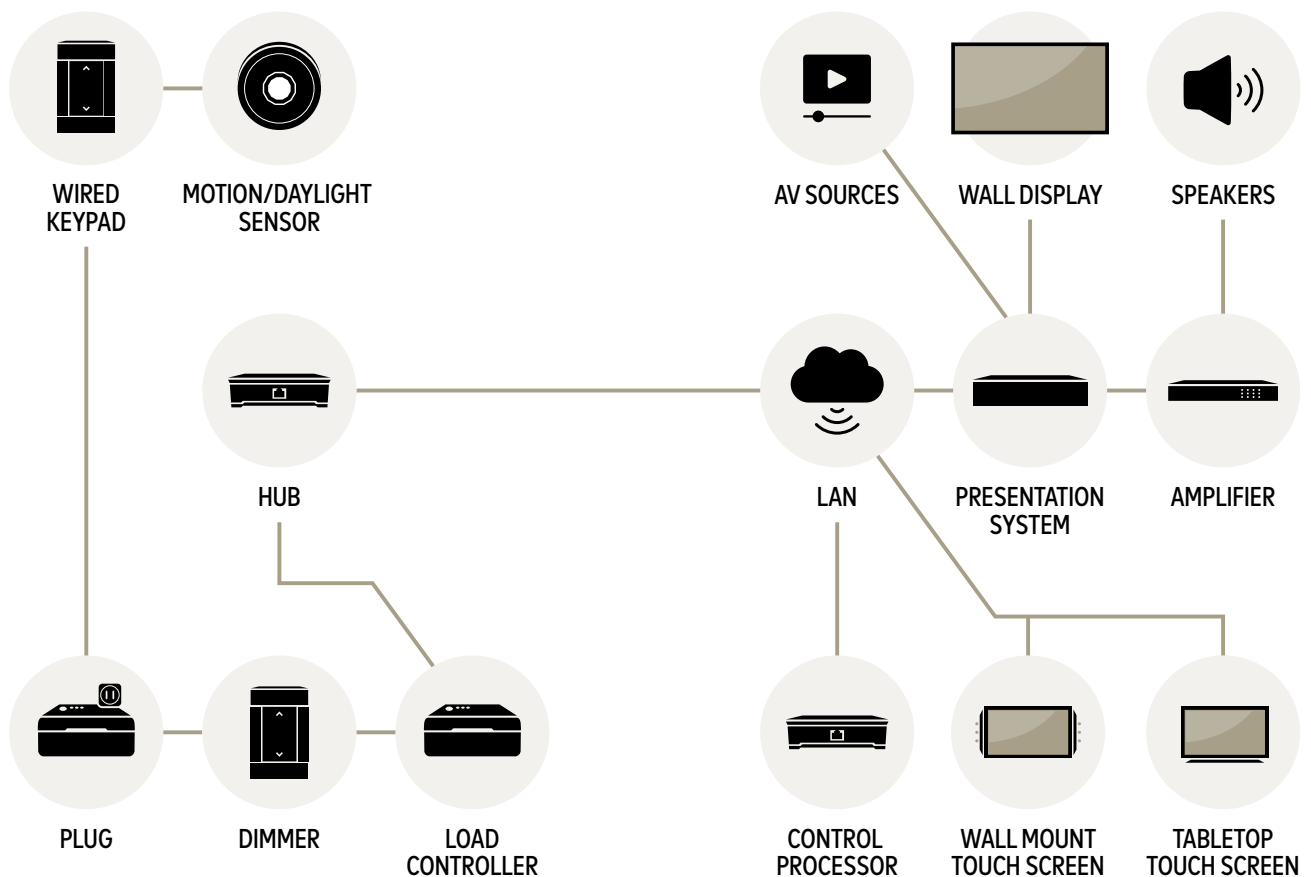

Find the space

Ideal for spaces where distributed or wireless controls are not appropriate, Crestron SpaceBuilder systems can be networked to provide centralized monitoring, management, and master control.

Easy does it. All of it.

Networked together. Integrated with Building Management Systems. Managed remotely by the Crestron XiO Cloud® platform. Crestron commercial lighting controls are easy to manage in whichever way you choose. Wired or wireless, either one will work with Crestron AV solutions and most lighting fixtures for virtually unlimited configuration.

Nothing brings people
together easier than
these cost-effective,
easy-to-manage building
solutions from Crestron.
